Devin Haslam

Staff Software Engineer

devinrhaslam@gmail.com | linkedin.com/in/devin-haslam

Summary of Qualifications

- 8 years of engineering experience focused on backend development and architecture
- Tech lead mentoring 8 engineers, driving projects from design to production deployment
- Hardened services against traffic spikes with async queues and a 200M+ request rate limiter
- Delivered AI-powered features for enterprise retailers including TikTok, Amazon, and SHEIN

Experience

Staff Software Engineer - Happy Returns (PayPal, now UPS)

Feb. 2022 - Present

- Led 4 engineers to build Return Vision, an AI-powered fraud detection system for 150+ retailers; reduced fraudulent returns by 85% vs. mail, delivering $30K+/month in savings per partner
- Drove architectural direction for the team's email service, championing an async SQS/Lambda design over a short-term scaling fix to eliminate email drops during traffic spikes
- Launched nationwide QR-code drop-off returns at Staples and UPS, unlocking TikTok's integration and 1.2M annual returns
- Built the company's shared rate limiter (distributed Redis, leaky bucket); governs 200M+ requests and absorbs the partner traffic spikes that once took down production
- Built SQS/Lambda data ingestion pipeline for SHEIN check-in data, processing 43K+ messages per daily run into Redshift while respecting external API rate limits
- Migrated company's core returns data model from PostgreSQL to DynamoDB behind a gRPC data access layer via phased dual-read/write rollout; zero data loss, up to 45x P90 latency reduction

Software Engineer - Jido Maps

Jun. 2018 - Feb. 2022

- Built a self-serve pipeline orchestrating distributed render jobs to train and ship object detectors from user-uploaded 3D models in under an hour
- Built inventory search and ranking for 50K+ SKUs scraped from hundreds of local retailers
- Shipped in-store recognition of 100+ products for IKEA Harajuku, in production since launch
- Built a Three.js dashboard for editing 3D scenes, syncing to live mobile clients sub-second

Graduate Research Assistant - Old Dominion University

Apr. 2016 - Jul. 2018

- Explored heuristic algorithms to find the shortest path in a weighted directed graph
- Developed a custom deep convolutional neural network to label voxels in 3D images (M.S. thesis)

Education

Old Dominion University

May 2013 - July 2018

- Graduated with a **Master's** of Science in Computer Science

Skills

Languages:	Go, TypeScript, JavaScript, Python, SQL (familiar: C++, Java, Swift)
Systems / Cloud:	Distributed Systems, Microservices, Event-Driven Architecture, REST, gRPC, AWS (Lambda, SQS, SNS, S3, Step Functions)
Frameworks / Tools:	React, Cypress, Kubernetes, Docker, CI/CD (GitHub Actions), Observability (Datadog), PostgreSQL, DynamoDB, Redshift, Redis
AI / LLM:	Production LLM integrations (Gemini, OpenAI), prompt engineering, AI agents
